Disinfection spraying system **LUGGAGE**

Due to the tightened hygiene measures related to coronavirus SARS-CoV-2, suitcase trolleys are currently not available at many airports. There is a lack of personnel or it is too costly to clean the trolleys manually with disinfectant.

For your customers this means more difficult and uncomfortable transport of their luggage. Give your customers security again and enable relaxed travel. They will thank you for it.

With our further development of the proven **TEKA desinfecto® Spray** disinfection spraying systems for shopping carts, among other things, we started exactly there and have now designed a version for **luggage trolleys**.

The precisely aligned spray valves automatically wet the handle surface of the trolley with disinfectant. The customer no longer needs to touch a switch to activate the valves. In addition to disinfecting the trolley, every customer can also disinfect their hands. The spray mist is triggered contactlessly by a sensor. The disinfectant is supplied directly via a hose from the original container.

Due to the high degree of automation and the contactless operation we achieve a practical and fast handling on site without high personnel expenditure.

Compact and mobile

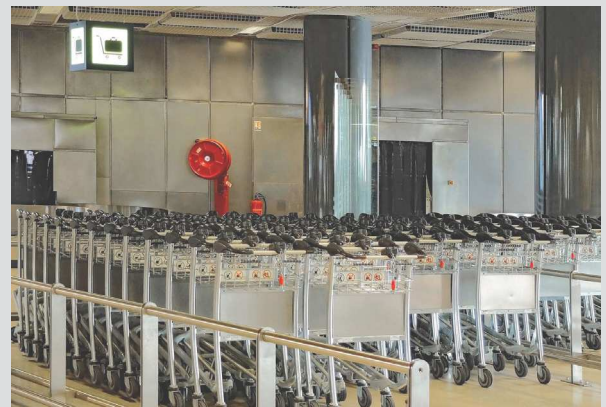

The **TEKA desinfecto® Luggage** system impresses with its compact and robust design made of high-quality materials. At the same time, four fixable rollers are installed below the spraying unit for easy transport as well as a stop for the exact positioning of the trolley.

Desinfecto ... everything hygienically clean!

TEKA desinfecto® Spray - against viruses and germs

- We would be pleased to submit you a non-binding offer for your individual application or carry out spray trials and demonstrations - also for surface disinfection.
- Please feel free to contact us.

Simple disinfection

Advantages

- feel secure with your customer
- Image - Enhancement
- contactless release
- exact wetting of the luggage cart handles
- finest spray mist without dripping
- varied module programme

Connection: 230 V

Materials: Frame
• stainless steel, anodized aluminium
Spray valves
• stainless steel, brass, FKM

Delivery time: short term after arrangement, direct delivery and service by us, without distributor
